FIRE & SOUND  
OFFICE PARTITIONING

# FINESSE FS

Fire & Sound

The Finesse Fire and Sound office partitioning system provides the foundation for the Finesse and Crystal family of demountable high quality, robust and attractive office partitioning systems.

Many of the carefully developed parts are shared between the Finesse Fire and Sound system, the Crystal Double Glazed system and the Crystal single Glazed system.

This unique design feature providing the office planner with total flexibility in layout options, enabling elevation changes from fire rated to single glazed to full height drywall to double glazed in any order at any location.

## FIRE & SOUND

FINESSE FS is a certified FIRE RATED system achieving 60 certification with a full height drywall arrangement and 30 minutes with either full height or part height glazing.

Finesse is certified to achieve a SOUND REDUCTION of up to dB 45 with full height 15mm thick boards with Rockwall infill or 43dB using 12.5mm boards with Rockwall infill.

Full details for Fire and Sound ratings on this system can be found in our Electronic Catalogue, please contact one of our many distributors for a free copy.

## FINESSE FS KEY FEATURES

- Rapid installation & demount ability
- Fully re usable
- Fully re locatable
- Significant cost advantage
- Fire rating for 30 minutes & 60 minutes in solid
- Fire rating for 30 minutes in glazed (up to fully glazed) & doors
- Available in 75, 100 & 125mm configuration
- Single or double plasterboard walls
- 12.5mm boards & 15mm boards within the same framework
- Timber or full glass doors
- Excellent acoustic properties
- Pencil line, cover, omega trims & flush joint construction
- Extensive variety of panels & panel finishes
- Single glazed available in central & offset (UPVC)
- Double glazed profiles available for standard & integral blinds (UPVC)
- Aluminium double glazed profiles
- Integration of CRYSTAL SG & CRYSTAL DG sections with FINESSE FS
- 75mm concealed fix (reversible) aluminium skirting
- Radius corner profiles with 45°/135° & 90° configurations

## INNOVATION

The FINESSE FS office partitioning system is designed to provide a full height or part height 75mm or 100mm or 120mm thick drywall elevation, incorporating two or four 12.5mm thick boards or two 15mm thick boards with optional 6.0mm or 8.8mm thick full height or part height glass, arranged in single or double glazed configuration with centrally fitted or offset fitted glass or in aluminium double glazed 6 to 10mm glass configuration.

A choice of glazing chairs enables internally mounted venetian blinds to be fitted if privacy is required, and our unique hidden fix board clips give a pencil line joint with a flush wall finish, yet completely demountable and reusable.

FA550 45°/135° CORNER POST

## CONNECTIVITY

The Finesse FS system is fully compatible with Crystal SG (single glazed) and Crystal DG (double glazed) systems enabling a seamless transition from a section of 60 minute drywall partitioning to either a section of full height double or single glazed partitioning with the added benefit of either internal blinds in the double glazed system using the CGD160 internal mullion post, or manifestations on any of the three systems.

## DESIGN

With the most up to date cad and 3D visualization software being used, new sections can be designed and visualized with ease, speeding up the manufacturing process.

This is one of the many reasons why Finesse FS is specified in so many installations and how we stay ahead of the industry.

## FINISHES

FINESSE FS can be specified in an almost unlimited array of colours which can be chosen from RAL and BS colour standards to give a unique colour scheme or to blend in with an existing design.

The new addition to the system is a wood wrap finish which can mimic the look of real wood but with the durability and hard wearing properties of powder coating while reducing the environmental impact and the cost significantly.

All visible surfaces are wrapped with the wood finish and all non visible surfaces are painted with the nearest colour match to the wood effect.

To find out what wood finishes and colours are available please contact us for more information.

FA532 DOOR STOP

## DOOR FRAMES

FINESSE FS door frames are factory produced and are provided in kits suitable for timber doors and glass doors. Standard sizes are stocked but any door leaf sizes are available.

All door frame kits are fully engineered incorporating hinges, strike posts, door heads, hinges, strike plates, closing strips and screws.
